

EcoGreenCabins

WHY CHOOSE ECOGREENCABINS

COMES WITH AN UP TO 10-YEARS GUARANTEE

Most components, including the windows and doors, come with a 10-year guarantee for your assurance.

ENERGY EFFICIENT

Integrating solar panels offers an eco-friendly way to minimise the cost of electricity.

PLANNING PERMISSION

Planning permission is generally not required as our structure is built within your permitted development rights.

3D VIRTUAL MODEL

Our designers will create a 3D virtual representation of your cabin, so that you can be 100% confident in your purchase before you buy.

THANK YOU ECOGREENCABINS, I COULDN'T
BE HAPPIER WITH MY NEW GARDEN OFFICE.

ABOUT US

EcoGreenCabins have brought together a team of designers and construction specialists with over 100-years-experience to create a stunning eco-friendly solution to the garden building. At EcoGreenCabins, we work with quality, environmentally friendly and sustainable materials and introduce eco-solutions such as solar panels and other sustainable materials to create a modern, energy-efficient building at a cost-effective price, including low-cost foundation solutions. We use the latest insulating techniques whilst reducing plastic usage as much as possible unless it is used once and can last the entire life of the cabin. We offer a range of designs and styling options to suit your space and budget.

EcoGreenCabins

WHAT IS AN ECOGREENCABIN?

An EcoGreenCabin is a cost-effective solution for those in need of some extra space. Our contemporary detached cabins do not require planning permission, saving you valuable time and money. EcoGreenCabins are also cheaper (per square metre) to run than both a conservatory and an extension, especially when incorporating energy-efficient options such as solar panels.

Our cabins come in a range of styling options so that you can tailor your cabin to your style and needs. Whether you want to create a designated entertainment area, a gym or office, contact our team today, and we will help you create the perfect space for you.

I couldn't be happier with my new garden office

CABIN RANGE

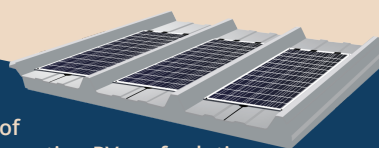

At EcoGreenCabins, we understand that everyone has different needs and desires. That is why we provide several options to suit your life and style, creating a unique and purposeful bespoke cabin.

We have a range of finishing options that allow you to customise your cabin and make it your own. Each option can be viewed below, along with the options price.

OUR TEAM

Our team of designers and construction specialists with over 20-years-experience in the industry are well equipped to help you with you cabin needs. Our designers can create a virtual 3D model of your cabin before it is built so you can feel confident in your purchase.

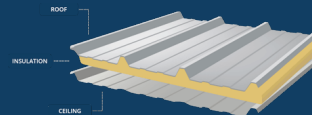

POWER PANEL

PowerPanel for pitched roof applications is the next generation PV roof solution

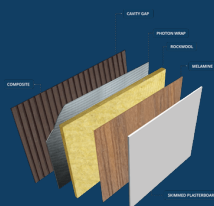

Combining industry leading QuadCore insulated panels with high-efficiency monocrystalline photovoltaic panels in a single, factory-manufactured component.

OUR ROOFING

The composition of our roof is a 60mm - 95mm section of high density fire resistant insulation surrounded by 2 steel plates. All weather-exposed steel elements are coated in an epoxy resin to ensure 100% weather proofing and resistance to growth of organic materials.

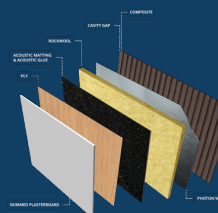

OUR PLASTER PACK

Plasterboards are fixed to the walls and ceilings and skimmed to give a luxury and homely feel. Recessed electrical sockets are fitted as standard. Skirting boards are provided in either oak or white finish.

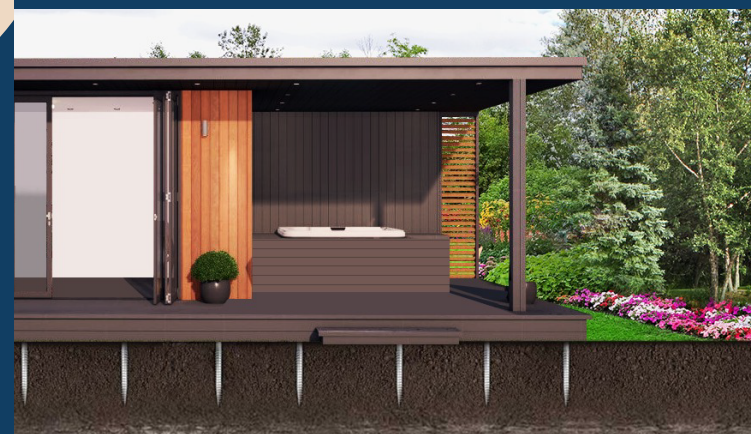

OUR ACOUSTIC PACK

Our acoustic pack is a sound reducing method which results in a reduction of the transfer of sound by up to 45 decibels*. Recessed electrical sockets are fitted as standard.

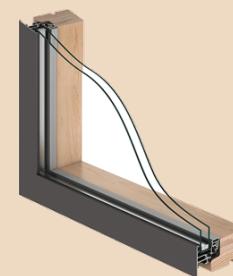

OUR BASE & FOUNDATIONS

We have developed our own unique, tried and tested ground screws or difficult conditions with a concrete pile foundation system to ensure your garden room is perfectly level. What's more, the cost of our foundation system is included in the standard price of your garden cabin. Our ground-screw or concrete mini pile system approach is significantly more environmentally friendly than a solid concrete base but remains just as effective. The technique also provides a faster and more environmentally friendly foundation than concrete that requires no digging, no skips. Furthermore, it causes no mess, which means less initial groundwork and upheaval for most customers.

OUR STANDARD GLAZING

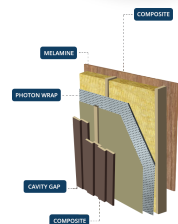

All doors and windows are fitted as standard with hard coated, low-e Pilkington K Optiwhite 'extra clear' double-glazing, which is argon filled and fitted with a Planitherm layer and Swisspacer providing superior insulation and energy efficiency

OUR STIPPOLYTE GLAZING

For additional privacy it is possible to switch to obscured/frosted glass as a no cost option.

OUR INSULATED WALLS

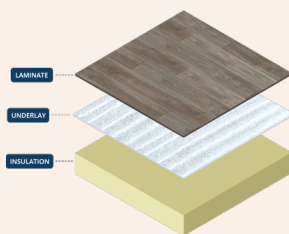

At EcoGreenCabins, we engineer our unique wall panels from the highest standard of sustainable materials for a superior finish. Our highly efficient thermal insulation prevents extremes of temperature and ensures all year round protection from hot and cold weather.

OUR FLOORING

The sub-floors of our garden rooms are engineered to sit clear of the ground to allow air to circulate and remove any risk of rising damp.

Constructed with 80mm polyurethane insulation sandwiched

OUR GUTTERING

4" wide guttering is provided as standard on all garden room buildings, helping to manage the flow of water from the roof and away from your garden room.
